Weld – Update information

Version 1.0.2 /Feb 2025

1. Material in section list is now included
2. Error handling for files updated
3. RecentFilesUpdated
4. DNV-OS-C101 added in setup

Version 1.0.1 /Jan 2025

5. Minor updates on screen.
6. Minor adjustments to weld symbols. Weld symbols follow now System A (ISO 2553). The dashed line is omitted for symmetrical welds.
7. Weld Detail, single part pen is now limited to s<=t
8. Weld-Detail, inactive weld B is now not included in printout calculations
9. Weld-Detail, inactive weld B remains possible to activate
10. Weld Fatigue, h/t should be >=0.2. h is now changed to z to be consistent with the program
11. a, s, z, t has now input based on numeric up down instead of traditional input box
12. Adding new profile to section list updates the section list for Weld joint program
13. Weld joint – one sided fillet and PP works now for flatbars
14. Weld joint – square profile, only one sided weld all around is valid

Version 1.0

15. First issue, 2024_10_01
